Child Development: Serve and Return Builds Brains

14

Child Development Milestones

- Social/Emotional
- Physical/Movement
- Language/Communication
- Cognitive/Thinking

15

Child Development: Developmental Milestones

- Read through the Milestone Moments or Positive Parenting School Age handouts that correspond with the ages of children in your care
- What is important for us to know about children at this age?
- What are some activities you could do with the children to support their development?

16

Your baby at 2 months

Baby's Name _____

Baby's Age _____

Today's Date _____

Milestones matter! How your baby plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your baby has reached by 2 months. Take this with you and talk with your baby's doctor at every well-child visit about the milestones your baby has reached and what to expect next.

What most babies do by this age:

Social/Emotional Milestones

- ☐ Calms down when spoken to or picked up
- ☐ Looks at your face
- ☐ Seems happy to see you when you walk up to her
- ☐ Smiles when you talk to or smile at her

Language/Communication Milestones

- ☐ Makes sounds other than crying
- ☐ Reacts to loud sounds

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Watches you as you move
- ☐ Looks at a toy for several seconds

Movement/Physical Development Milestones

- ☐ Holds head up when on tummy
- ☐ Moves both arms and both legs
- ☐ Opens hands briefly

Other important things to share with the doctor...

- What are some things you and your baby do together?
- What are some things your baby likes to do?
- Is there anything your baby does or does not do that concerns you?
- Has your baby lost any skills he/she once had?
- Does your baby have any special healthcare needs or was he/she born prematurely?

You know your baby best. Don't wait. If your baby is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your baby's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

1. Ask for a referral to a specialist who can evaluate your baby more; and
2. Call your state or territory's early intervention program to find out if your baby can get services to help. Learn more and find the number at [cdc.gov/FindEI](https://www.cdc.gov/FindEI).

For more on how to help your baby, visit [cdc.gov/Concerned](https://www.cdc.gov/Concerned).

Help your baby learn and grow

As your baby's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your baby's doctor and teachers if you have questions or for more ideas on how to help your baby's development.

- Respond positively to your baby. Act excited, smile, and talk to him when he makes sounds. This teaches him to take turns “talking” back and forth in conversation.
- Talk, read, and sing to your baby to help her develop and understand language.
- Spend time cuddling and holding your baby. This will help him feel safe and cared for. You will not spoil your baby by holding or responding to him.
- Being responsive to your baby helps him learn and grow. Limiting your screen time when you are with your baby helps you be responsive.
- Take care of yourself. Parenting can be hard work! It's easier to enjoy your new baby when you feel good yourself.
- Learn to notice and respond to your baby's signals to know what she's feeling and needs. You will feel good and your baby will feel safe and loved. For example, is she trying to “play” with you by making sounds and looking at you, or is she turning her head away, yawning, or becoming fussy because she needs a break?
- Lay your baby on his tummy when he is awake and put toys at eye level in front of him. This will help him practice lifting his head up. Do not leave your baby alone. If he seems sleepy, place him on his back in a safe sleep area (firm mattress with no blankets, pillows, bumper pads, or toys).
- Feed only breast milk or formula to your baby. Babies are not ready for other foods, water or other drinks for about the first 6 months of life.
- Learn when your baby is hungry by looking for signs. Watch for signs of hunger, such as putting hands to mouth, turning head toward breast/bottle, or smacking/licking lips.
- Look for signs your baby is full, such as closing her mouth or turning her head away from the breast/bottle. If your baby is not hungry, it's ok to stop feeding.
- Do not shake your baby or allow anyone else to—ever! You can damage his brain or even cause his death. Put your baby in a safe place and walk away if you're getting upset when he is crying. Check on him every 5–10 minutes. Infant crying is often worse in the first few months of life, but it gets better!
- Have routines for sleeping and feeding. This will help your baby begin to learn what to expect.

To see more tips and activities download CDC's Milestone Tracker app.

This milestone checklist is not a substitute for a standardized, validated developmental screening tool. These developmental milestones show what most children (75% or more) can do by each age. Subject matter experts selected these milestones based on available data and expert consensus.

Your baby at 4 months

Baby's Name _____

Baby's Age _____

Today's Date _____

Milestones matter! How your baby plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your baby has reached by 4 months. Take this with you and talk with your baby's doctor at every well-child visit about the milestones your baby has reached and what to expect next.

What most babies do by this age:

Social/Emotional Milestones

- ☐ Smiles on his own to get your attention
- ☐ Chuckles (not yet a full laugh) when you try to make her laugh
- ☐ Looks at you, moves, or makes sounds to get or keep your attention

Language/Communication Milestones

- ☐ Makes sounds like "oooo", "aahh" (cooing)
- ☐ Makes sounds back when you talk to him
- ☐ Turns head towards the sound of your voice

Cognitive Milestones

(learning, thinking, problem-solving)

- ☐ If hungry, opens mouth when she sees breast or bottle
- ☐ Looks at his hands with interest

Movement/Physical Development Milestones

- ☐ Holds head steady without support when you are holding her
- ☐ Holds a toy when you put it in his hand
- ☐ Uses her arm to swing at toys
- ☐ Brings hands to mouth
- ☐ Pushes up onto elbows/forearms when on tummy

Other important things to share with the doctor...

- What are some things you and your baby do together?
- What are some things your baby likes to do?
- Is there anything your baby does or does not do that concerns you?
- Has your baby lost any skills he/she once had?
- Does your baby have any special healthcare needs or was he/she born prematurely?

You know your baby best. Don't wait. If your baby is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your baby's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Help your baby learn and grow

As your baby's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your baby's doctor and teachers if you have questions or for more ideas on how to help your baby's development.

- Respond positively to your baby. Act excited, smile, and talk to him when he makes sounds. This teaches him to take turns “talking” back and forth in conversation.
- Provide safe opportunities for your baby to reach for toys, kick at toys and explore what is around her. For example, put her on a blanket with safe toys.
- Allow your baby to put safe things in his mouth to explore them. This is how babies learn. For example, let him see, hear, and touch things that are not sharp, hot, or small enough to choke on.
- Talk, read, and sing to your baby. This will help her learn to speak and understand words later.
- Limit screen time (TV, phones, tablets, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Babies learn by talking, playing, and interacting with others.
- Feed only breast milk or formula to your baby. Babies are not ready for other foods, water or other drinks for about the first 6 months of life.
- Give your baby safe toys to play with that are easy to hold, like rattles or cloth books with colorful pictures for her age.
- Let your baby have time to move and interact with people and objects throughout the day. Try not to keep your baby in swings, strollers, or bouncy seats for too long.
- Set steady routines for sleeping and feeding.
- Lay your baby on her back and show her a bright-colored toy. Move the toy slowly from left to right and up and down to see if she watches how the toy moves.
- Sing and talk to your baby as you help her “exercise” (move her body) for a few minutes. Gently bend and move her arms and legs up and down.

Your baby at 6 months

Baby's Name _____

Baby's Age _____

Today's Date _____

Milestones matter! How your baby plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your baby has reached by 6 months. Take this with you and talk with your baby's doctor at every well-child visit about the milestones your baby has reached and what to expect next.

What most babies do by this age:

Social/Emotional Milestones

- ☐ Knows familiar people
- ☐ Likes to look at himself in a mirror
- ☐ Laughs

Language/Communication Milestones

- ☐ Takes turns making sounds with you
- ☐ Blows "raspberries" (sticks tongue out and blows)
- ☐ Makes squealing noises

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Puts things in her mouth to explore them
- ☐ Reaches to grab a toy he wants
- ☐ Closes lips to show she doesn't want more food

Movement/Physical Development Milestones

- ☐ Rolls from tummy to back
- ☐ Pushes up with straight arms when on tummy
- ☐ Leans on hands to support himself when sitting

Other important things to share with the doctor...

- What are some things you and your baby do together?
- What are some things your baby likes to do?
- Is there anything your baby does or does not do that concerns you?
- Has your baby lost any skills he/she once had?
- Does your baby have any special healthcare needs or was he/she born prematurely?

You know your baby best. Don't wait. If your baby is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your baby's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Help your baby learn and grow

As your baby's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your baby's doctor and teachers if you have questions or for more ideas on how to help your baby's development.

- Use “back and forth” play with your baby. When your baby smiles, you smile; when he makes sounds, you copy them. This helps him learn to be social.
- “Read” to your baby every day by looking at colorful pictures in magazines or books and talk about them. Respond to her when she babbles and “reads” too. For example, if she makes sounds, say “Yes, that’s the doggy!”
- Point out new things to your baby and name them. For example, when on a walk, point out cars, trees, and animals.
- Sing to your baby and play music. This will help his brain develop.
- Limit screen time (TV, tablets, phones, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Babies learn by talking, playing, and interacting with others.
- When your baby looks at something, point to it and talk about it.
- Put your baby on her tummy or back and put toys just out of reach. Encourage her to roll over to reach the toys.
- Learn to read your baby's moods. If he's happy, keep doing what you are doing. If he's upset, take a break and comfort your baby.
- Talk with your baby's doctor about when to start solid foods and what foods are choking risks. Breast milk or formula is still the most important source of “food” for your baby.
- Learn when your baby is hungry or full. Pointing to foods, opening his mouth to a spoon, or getting excited when seeing food are signs that he is hungry. Others, like pushing food away, closing his mouth, or turning his head away from food tells you that he's had enough.
- Help your baby learn she can calm down. Talk softly, hold, rock, or sing to her, or let her suck on her fingers or a pacifier. You may offer a favorite toy or stuffed animal while you hold or rock her.
- Hold your baby up while she sits. Let her look around and give her toys to look at while she learns to balance herself.

Your baby at 9 months*

Baby's Name _____

Baby's Age _____

Today's Date _____

Milestones matter! How your baby plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your baby has reached by 9 months. Take this with you and talk with your baby's doctor at every well-child visit about the milestones your baby has reached and what to expect next.

What most babies do by this age:

Social/Emotional Milestones

- ☐ Is shy, clingy, or fearful around strangers
- ☐ Shows several facial expressions, like happy, sad, angry, and surprised
- ☐ Looks when you call her name
- ☐ Reacts when you leave (looks, reaches for you, or cries)
- ☐ Smiles or laughs when you play peek-a-boo

Language/Communication Milestones

- ☐ Makes different sounds like "mamamama" and "babababa"
- ☐ Lifts arms up to be picked up

Cognitive Milestones

(learning, thinking, problem-solving)

- ☐ Looks for objects when dropped out of sight (like his spoon or toy)
- ☐ Bangs two things together

Movement/Physical Development Milestones

- ☐ Gets to a sitting position by herself
- ☐ Moves things from one hand to her other hand
- ☐ Uses fingers to "rake" food towards himself
- ☐ Sits without support

* It's time for developmental screening!

At 9 months, your baby is due for general developmental screening, as recommended for all children by the American Academy of Pediatrics. Ask the doctor about your baby's developmental screening.

Other important things to share with the doctor...

- What are some things you and your baby do together?
- What are some things your baby likes to do?
- Is there anything your baby does or does not do that concerns you?
- Has your baby lost any skills he/she once had?
- Does your baby have any special healthcare needs or was he/she born prematurely?

You know your baby best. Don't wait. If your baby is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your baby's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Acting early can make
a real difference!

American Academy
of Pediatrics

DEDICATED TO THE HEALTH OF ALL CHILDREN®

Help your baby learn and grow

As your baby's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your baby's doctor and teachers if you have questions or for more ideas on how to help your baby's development.

- Repeat your baby's sounds and say simple words using those sounds. For example, if your baby says "bababa," repeat "bababa," then say "book."
- Place toys on the ground or on a play mat a little out of reach and encourage your baby to crawl, scoot, or roll to get them. Celebrate when she reaches them.
- Teach your baby to wave "bye-bye" or shake his head "no." For example, wave and say "bye-bye" when you are leaving. You can also teach simple baby sign language to help your baby tell you what he wants before he can use words.
- Play games, such as peek-a-boo. You can cover your head with a cloth and see if your baby pulls it off.
- Play with your baby by dumping blocks from a container and putting them back in together.
- Play games with your baby, such as my turn, your turn. Try this by passing a toy back and forth.
- "Read" to your baby. Reading can be talking about pictures. For example, while looking at books or magazines, name the pictures as you point to them.
- Limit screen time (TV, tablets, phones, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Babies learn by talking, playing, and interacting with others.
- Find out about choking risks and safe foods to feed your baby. Let him practice feeding himself with his fingers and using a cup with a small amount of water. Sit next to your baby and enjoy mealtime together. Expect spills. Learning is messy and fun!
- Ask for behaviors that you want. For example, instead of saying "don't stand," say "time to sit."
- Help your baby get used to foods with different tastes and textures. Foods can be smooth, mashed, or finely chopped. Your baby might not like every food on the first try. Give her a chance to try foods again and again.
- Say a quick and cheerful goodbye instead of sneaking away so your baby knows you are leaving, even if he cries. He will learn to calm himself and what to expect. Let him know when you return by saying "Daddy's back!"

To see more tips and activities download CDC's Milestone Tracker app.

This milestone checklist is not a substitute for a standardized, validated developmental screening tool. These developmental milestones show what most children (75% or more) can do by each age. Subject matter experts selected these milestones based on available data and expert consensus.

Milestones matter! How your baby plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your baby has reached by 12 months. Take this with you and talk with your baby's doctor at every well-child visit about the milestones your baby has reached and what to expect next.

What most babies do by this age:

Social/Emotional Milestones

- ☐ Plays games with you, like pat-a-cake

Language/Communication Milestones

- ☐ Waves "bye-bye"
- ☐ Calls a parent "mama" or "dada" or another special name
- ☐ Understands "no" (pauses briefly or stops when you say it)

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Puts something in a container, like a block in a cup
- ☐ Looks for things he sees you hide, like a toy under a blanket

Movement/Physical Development Milestones

- ☐ Pulls up to stand
- ☐ Walks, holding on to furniture
- ☐ Drinks from a cup without a lid, as you hold it
- ☐ Picks things up between thumb and pointer finger, like small bits of food

Other important things to share with the doctor...

- What are some things you and your baby do together?
- What are some things your baby likes to do?
- Is there anything your baby does or does not do that concerns you?
- Has your baby lost any skills he/she once had?
- Does your baby have any special healthcare needs or was he/she born prematurely?

You know your baby best. Don't wait. If your baby is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your baby's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Help your baby learn and grow

As your baby's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your baby's doctor and teachers if you have questions or for more ideas on how to help your baby's development.

- Teach your baby "wanted behaviors." Show her what to do and use positive words or give her hugs and kisses when she does it. For example, if she pulls your pet's tail, teach her how to pet gently and give her a hug when she does it.
- Talk or sing to your baby about what you're doing. For example, "Mommy is washing your hands" or sing, "This is the way we wash our hands."
- Build on what your baby tries to say. If he says "ta," say "Yes, a truck," or if he says "truck," say "Yes, that's a big, blue truck."
- Redirect your baby quickly and consistently by giving her a toy or moving her if she is getting into things you don't want her to get into. Save "no" for behaviors that are dangerous. When you say "no," say it firmly. Do not spank, yell, or give her long explanations.
- Give your baby safe places to explore. Baby-proof your home. For example, move sharp or breakable things out of reach. Lock away medicines, chemicals, and cleaning products. Save the Poison Help Line number, 800-222-1222, in all phones.
- Respond with words when your baby points. Babies point to ask for things. For example, say "You want the cup? Here is the cup. It's your cup." If he tries to say "cup," celebrate his attempt.
- Point to interesting things you see, such as a truck, bus, or animals. This will help your baby pay attention to what others are "showing" him through pointing.
- Limit screen time (TV, tablets, phones, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Babies learn by talking, playing, and interacting with others.
- Give your baby water, breast milk, or plain milk. You don't need to give your baby juice, but if you do, give 4 ounces or less a day of 100% fruit juice. Do not give your baby other sugary beverages, such as fruit drinks, soda, sports drinks, or flavored milks.
- Help your baby get used to foods with different tastes and textures. Foods can be smooth, mashed, or finely chopped. Your baby might not like every food on the first try. Give your baby a chance to try foods again and again.
- Give your baby time to get to know a new caregiver. Bring a favorite toy, stuffed animal, or blanket to help comfort your baby.
- Give your baby pots and pans or a small musical instrument like a drum or cymbals. Encourage your baby to make noise.

Your child at 15 months

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by 15 months. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Copies other children while playing, like taking toys out of a container when another child does
- ☐ Shows you an object she likes
- ☐ Claps when excited
- ☐ Hugs stuffed doll or other toy
- ☐ Shows you affection (hugs, cuddles, or kisses you)

Language/Communication Milestones

- ☐ Tries to say one or two words besides "mama" or "dada," like "ba" for ball or "da" for dog
- ☐ Looks at a familiar object when you name it
- ☐ Follows directions given with both a gesture and words. For example, he gives you a toy when you hold out your hand and say, "Give me the toy."
- ☐ Points to ask for something or to get help

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Tries to use things the right way, like a phone, cup, or book
- ☐ Stacks at least two small objects, like blocks

Movement/Physical Development Milestones

- ☐ Takes a few steps on his own
- ☐ Uses fingers to feed herself some food

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

1. Ask for a referral to a specialist who can evaluate your child more; and
2. Call your state or territory's early intervention program to find out if your child can get services to help. Learn more and find the number at [cdc.gov/FindEI](https://www.cdc.gov/FindEI).

**Don't wait.
Acting early can make
a real difference!**

American Academy
of Pediatrics

DEDICATED TO THE HEALTH OF ALL CHILDREN®

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Help your child learn to speak. A child's early words are not complete. Repeat and add to what he says. He may say "ba" for ball and you can say "Ball, yes, that's a ball."
- Tell your child the names of objects when he points to them and wait a few seconds to see if he makes any sounds before handing it to him. If he does make a sound, acknowledge him, and repeat the name of the object. "Yes! Cup."
- Find ways to let your child help with everyday activities. Let her get her shoes to go outside, put the snacks in the bag for the park, or put the socks in the basket.
- Have steady routines for sleeping and feeding. Create a calm, quiet bedtime for your child. Put on his pajamas, brush his teeth, and read 1 or 2 books to him. Children between 1 and 2 years of age need 11 to 14 hours of sleep a day (including naps). Consistent sleep times make it easier!
- Show your child different things, such as a hat. Ask him, "What do you do with a hat? You put it on your head." Put it on your head and then give it to him to see if he copies you. Do this with other objects, such as a book or a cup.
- Sing songs with gestures, such as "Wheels on the Bus." See if your child tries to do some of the actions.
- Say what you think your child is feeling (for example, sad, mad, frustrated, happy). Use your words, facial expressions, and voice to show what you think she is feeling. For example, say "You are frustrated because we can't go outside, but you can't hit. Let's go look for an indoor game."
- Expect tantrums. They are normal at this age and are more likely if your child is tired or hungry. Tantrums should become shorter and happen less as he gets older. You can try a distraction, but it is ok to let him have the tantrum without doing anything. Give him some time to calm down and move on.
- Teach your child "wanted behaviors." Show her what to do and use positive words or give her hugs and kisses when she does it. For example, if she pulls your pet's tail, teach her how to pet gently. Give her a hug when she does it.
- Limit screen time (TV, tablets, phones, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Children learn by talking, playing, and interacting with others.
- Encourage your child to play with blocks. You can stack the blocks and she can knock them down.
- Let your child use a cup without a lid for drinking and practice eating with a spoon. Learning to eat and drink is messy but fun!

To see more tips and activities download CDC's Milestone Tracker app.

This milestone checklist is not a substitute for a standardized, validated developmental screening tool. These developmental milestones show what most children (75% or more) can do by each age. Subject matter experts selected these milestones based on available data and expert consensus.

Learn the Signs. Act Early.

Your child at 18 months*

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by 18 months. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Moves away from you, but looks to make sure you are close by
- ☐ Points to show you something interesting
- ☐ Puts hands out for you to wash them
- ☐ Looks at a few pages in a book with you
- ☐ Helps you dress him by pushing arm through sleeve or lifting up foot

Language/Communication Milestones

- ☐ Tries to say three or more words besides "mama" or "dada"
- ☐ Follows one-step directions without any gestures, like giving you the toy when you say, "Give it to me."

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Copies you doing chores, like sweeping with a broom
- ☐ Plays with toys in a simple way, like pushing a toy car

Movement/Physical Development Milestones

- ☐ Walks without holding on to anyone or anything
- ☐ Scribbles
- ☐ Drinks from a cup without a lid and may spill sometimes
- ☐ Feeds herself with her fingers
- ☐ Tries to use a spoon
- ☐ Climbs on and off a couch or chair without help

* It's time for developmental screening!

At 18 months, your child is due for general developmental screening and an autism screening, as recommended for all children by the American Academy of Pediatrics. Ask the doctor about your child's developmental screening.

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

1. Ask for a referral to a specialist who can evaluate your child more; and
2. Call your state or territory's early intervention program to find out if your child can get services to help. Learn more and find the number at [cdc.gov/FindEI](https://www.cdc.gov/FindEI).

For more on how to help your child, visit [cdc.gov/Concerned](https://www.cdc.gov/Concerned).

DEDICATED TO THE HEALTH OF ALL CHILDREN®

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Use positive words and give more attention to behaviors you want to see ("wanted behaviors"). For example, "Look how nicely you put the toy away." Give less attention to those you don't want to see.
- Encourage "pretend" play. Give your child a spoon so she can pretend to feed her stuffed animal. Take turns pretending.
- Help your child learn about others' feelings and about positive ways to react. For example, when he sees a child who is sad, say "He looks sad. Let's bring him a teddy."
- Ask simple questions to help your child think about what's around her. For example, ask her, "What is that?"
- Let your child use a cup without a lid for drinking and practice eating with a spoon. Learning to eat and drink is messy but fun!
- Give simple choices. Let your child choose between two things. For example, when dressing, ask him if he wants to wear the red or blue shirt.
- Have steady routines for sleeping and eating. For example, sit at the table with your child when she's eating meals and snacks. This helps set mealtime routines for your family.
- Limit screen time (TV, tablets, phones, etc.) to video calling with loved ones. Screen time is not recommended for children younger than 2 years of age. Children learn by talking, playing, and interacting with others. Limit your own screen time when you are with your child so you are able to respond to her words and actions.
- Ask your child's doctor and/or teachers if your child is ready for toilet training. Most children are not successful at toilet training until 2 to 3 years old. If he is not ready, it can cause stress and setbacks, which can cause training to take longer.
- Expect tantrums. They are normal at this age and should become shorter and happen less often as your child gets older. You can try distractions, but it's ok to ignore the tantrum. Give him some time to calm down and move on.
- Talk with your child by facing her and getting down to her eye level when possible. This helps your child "see" what you're saying through your eyes and face, not just your words.
- Start to teach your child the names for body parts by pointing them out and saying things like "Here's your nose, here's my nose," while pointing to her nose and your own.

Your child at 2 years*

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by age 2. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Notices when others are hurt or upset, like pausing or looking sad when someone is crying
- ☐ Looks at your face to see how to react in a new situation

Language/Communication Milestones

- ☐ Points to things in a book when you ask, like "Where is the bear?"
- ☐ Says at least two words together, like "More milk."
- ☐ Points to at least two body parts when you ask him to show you
- ☐ Uses more gestures than just waving and pointing, like blowing a kiss or nodding yes

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Holds something in one hand while using the other hand; for example, holding a container and taking the lid off

- ☐ Tries to use switches, knobs, or buttons on a toy
- ☐ Plays with more than one toy at the same time, like putting toy food on a toy plate

Movement/Physical Development Milestones

- ☐ Kicks a ball
- ☐ Runs
- ☐ Walks (not climbs) up a few stairs with or without help
- ☐ Eats with a spoon

* It's time for developmental screening!

At 2 years, your child is due for an autism screening, as recommended for all children by the American Academy of Pediatrics. Ask the doctor about your child's developmental screening.

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Help your child learn how words sound, even if he can't say them clearly yet. For example, if your child says, "or nana," say "You want more banana."
- Watch your child closely during playdates. Children this age play next to each other, but do not know how to share and solve problems. Show your child how to deal with conflicts by helping her share, take turns, and use words when possible.
- Have your child help you get ready for mealtime, by letting him carry things to the table, such as plastic cups or napkins. Thank your child for helping.
- Give your child balls to kick, roll, and throw.
- Give toys that teach your child how to make things work and how to solve problems. For example, give her toys where she can push a button and something happens.
- Let your child play dress up with grown-up clothes, such as shoes, hats, and shirts. This helps him begin to pretend play.
- Allow your child to eat as much or as little as she wants at each meal. Toddlers don't always eat the same amount or type of food each day. Your job is to offer her healthy foods and it's your child's job to decide if and how much she needs to eat.
- Have steady routines for sleeping and feeding. Create a calm, quiet bedtime for your child. Put on his pajamas, brush his teeth, and read 1 or 2 books to him. Children this age need 11 to 14 hours of sleep a day (including naps). Consistent sleep times make it easier.
- Ask your child's doctor and/or teachers about toilet training to know if your child is ready to start. Most children are not able to toilet train until 2 to 3 years old. Starting too early can cause stress and setbacks, which can cause training to take longer.
- Use positive words when your child is being a good helper. Let him help with simple chores, such as putting toys or laundry in a basket.
- Play with your child outside, by playing "ready, set, go." For example, pull your child back in a swing. Say "Ready, set....", then wait and say "Go" when you push the swing.
- Let your child create simple art projects with you. Give your child crayons or put some finger paint on paper and let her explore by spreading it around and making dots. Hang it on the wall or refrigerator so your child can see it.

Learn the Signs. Act Early.

Your child at 30 months*

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by 30 months. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Plays next to other children and sometimes plays with them
- ☐ Shows you what she can do by saying, "Look at me!"
- ☐ Follows simple routines when told, like helping to pick up toys when you say, "It's clean-up time."

Language/Communication Milestones

- ☐ Says about 50 words
- ☐ Says two or more words, with one action word, like "Doggie run"
- ☐ Names things in a book when you point and ask, "What is this?"
- ☐ Says words like "I," "me," or "we"

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Uses things to pretend, like feeding a block to a doll as if it were food

- ☐ Shows simple problem-solving skills, like standing on a small stool to reach something
- ☐ Follows two-step instructions like "Put the toy down and close the door."
- ☐ Shows he knows at least one color, like pointing to a red crayon when you ask, "Which one is red?"

Movement/Physical Development Milestones

- ☐ Uses hands to twist things, like turning doorknobs or unscrewing lids
- ☐ Takes some clothes off by himself, like loose pants or an open jacket
- ☐ Jumps off the ground with both feet
- ☐ Turns book pages, one at a time, when you read to her

* It's time for developmental screening!

At 30 months, your child is due for general developmental screening as recommended for all children by the American Academy of Pediatrics. Ask the doctor about your child's developmental screening.

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Encourage “free play,” where your child can follow her interests, try new things, and use things in new ways.
- Use positive words and give more attention to behaviors you want to see (“wanted behaviors”), than to those you don’t want to see. For example, say “I like how you gave Jordan the toy.”
- Give your child food choices that are simple and healthy. Let him choose what to eat for a snack or what to wear. Limit choices to two or three.
- Ask your child simple questions about books and stories. Ask questions, such as “Who?” “What?” and “Where?”
- Help your child learn how to play with other children. Show him how by helping him share, take turns, and use his “words.”
- Let your child “draw” with crayons on paper, shaving cream on a tray, or chalk on a sidewalk. If you draw a straight line, see if she will copy you. When she gets good at lines, show her how to draw a circle.
- Let your child play with other children, such as at a park or library. Ask about local play groups and pre-school programs. Playing with others helps him learn the value of sharing and friendship.
- Eat family meals together as much as you can. Give the same meal to everyone. Enjoy each other’s company and avoid screen time (TV, tablets, and phones, etc.) during meals.
- Limit screen time (TV, tablets, phones, etc.) to no more than 1 hour per day of a children’s program with an adult present. Children learn by talking, playing, and interacting with others.
- Use words to describe things to your child, such as big/small, fast/slow, on/off, and in/out.
- Help your child do simple puzzles with shapes, colors, or animals. Name each piece when your child puts it in place.
- Play with your child outside. For example, take your child to the park to climb on equipment and run in safe areas.
- Allow your child to eat as much or as little as she wants at each meal. Your job is to offer her healthy foods and it’s your child’s job to decide if and how much she wants to eat.

Your child at 3 years

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by age 3. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Calms down within 10 minutes after you leave her, like at a childcare drop off
- ☐ Notices other children and joins them to play

Language/Communication Milestones

- ☐ Talks with you in conversation using at least two back-and-forth exchanges
- ☐ Asks "who," "what," "where," or "why" questions, like "Where is mommy/daddy?"
- ☐ Says what action is happening in a picture or book when asked, like "running," "eating," or "playing"
- ☐ Says first name, when asked
- ☐ Talks well enough for others to understand, most of the time

Cognitive Milestones

(learning, thinking, problem-solving)

- ☐ Draws a circle, when you show him how
- ☐ Avoids touching hot objects, like a stove, when you warn her

Movement/Physical Development Milestones

- ☐ Strings items together, like large beads or macaroni
- ☐ Puts on some clothes by himself, like loose pants or a jacket
- ☐ Uses a fork

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Encourage your child to solve her own problems with your support. Ask questions to help her understand the problem. Help her think of solutions, try one out, and try more if needed.
- Talk about your child's emotions and give him words to help him explain how he's feeling. Help your child manage stressful feelings by teaching him to take deep breaths, hug a favorite toy, or go to a quiet, safe place when he is upset.
- Set a few simple and clear rules that your child can follow, such as use gentle hands when playing. If he breaks a rule, show him what to do instead. Later, if your child follows the rule, recognize and congratulate him.
- Read with your child. Ask questions, such as "What is happening in the picture?" and/or "What do you think will happen next?" When she gives you an answer, ask for more details.
- Play counting games. Count body parts, stairs, and other things you use or see every day. Children this age are starting to learn about numbers and counting.
- Help your child develop his language skills by speaking to him in longer sentences than his, using real words. Repeat what he says, for example, "need nana," and then show how to use more "grown-up" words by saying, "I want a banana."
- Let your child help with making meals. Give him simple tasks, such as washing fruits and vegetables or stirring.
- Give your child instructions with 2 or 3 steps. For example, "Go to your room and get your shoes and coat."
- Limit screen time (TV, tablets, phones, etc.) to no more than 1 hour per day of a children's program with an adult present. Don't put any screens in your child's bedroom. Children learn by talking, playing, and interacting with others.
- Teach your child simple songs and rhymes, such as "Itsy Bitsy Spider" or "Twinkle, Twinkle, Little Star."
- Give your child an "activity box" with paper, crayons, and coloring books. Color and draw lines and shapes with your child.
- Encourage your child to play with other children. This helps him learn the value of friendship and how to get along with others.

Your child at 4 years

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by age 4. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Pretends to be something else during play (teacher, superhero, dog)
- ☐ Asks to go play with children if none are around, like "Can I play with Alex?"
- ☐ Comforts others who are hurt or sad, like hugging a crying friend
- ☐ Avoids danger, like not jumping from tall heights at the playground
- ☐ Likes to be a "helper"
- ☐ Changes behavior based on where she is (place of worship, library, playground)

Language/Communication Milestones

- ☐ Says sentences with four or more words
- ☐ Says some words from a song, story, or nursery rhyme
- ☐ Talks about at least one thing that happened during his day, like "I played soccer."
- ☐ Answers simple questions like "What is a coat for?" or "What is a crayon for?"

Cognitive Milestones (learning, thinking, problem-solving)

- ☐ Names a few colors of items
- ☐ Tells what comes next in a well-known story
- ☐ Draws a person with three or more body parts

Movement/Physical Development Milestones

- ☐ Catches a large ball most of the time
- ☐ Serves himself food or pours water, with adult supervision
- ☐ Unbuttons some buttons
- ☐ Holds crayon or pencil between fingers and thumb (not a fist)

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Help your child be ready for new places and meeting new people. For example, you can read stories or role play (pretend play) to help him be comfortable.
- Read with your child. Ask him what's happening in the story and what he thinks might happen next.
- Help your child learn about colors, shapes, and sizes. For example, ask the color, shapes, and size of things she sees during the day.
- Encourage your child to use "his words" to ask for things and solve problems but show him how. He may not know the words he needs. For example, help your child say, "Can I have a turn?" instead of taking something from someone.
- Help your child learn about others' feelings, and about positive ways to react. For example, when he sees a child who is sad, say "He looks sad. Let's bring him a teddy."
- Use positive words and give attention to behaviors you want to see ("wanted behaviors"). For example, say "You're sharing that toy so nicely!" Give less attention to those you don't want to see.
- Tell your child in a simple way why she can't do something you don't want her to do ("unwanted behavior"). Give her a choice of what she can do instead. For example, "You can't jump on the bed. Do you want to go outside and play or put on some music and dance?"
- Let your child play with other children, such as at a park or library. Ask about local play groups and pre-school programs. Playing with others helps you child learn the value of sharing and friendship.
- Eat meals with your child when possible. Let her see you enjoying healthy foods, such as fruits, vegetables, and whole grains, and drinking milk or water.
- Create a calm, quiet bedtime routine. Avoid any screen time (TV, phone, tablet, etc.) for 1 to 2 hours before bed and don't put any screens in your child's bedroom. Children this age need 10 to 13 hours of sleep a day (including naps). Consistent sleep times make it easier!
- Give your child toys or things that encourage his imagination, such as dress-up clothes, pots and pans to pretend cook, or blocks to build with. Join him in pretend play, such as eating the pretend food he cooks.
- Take time to answer your child's "why" questions. If you don't know the answer, say "I don't know," or help your child find the answer in a book, on the Internet, or from another adult.

Learn the Signs. Act Early.

Your child at 5 years

Child's Name _____

Child's Age _____

Today's Date _____

Milestones matter! How your child plays, learns, speaks, acts, and moves offers important clues about his or her development. Check the milestones your child has reached by age 5. Take this with you and talk with your child's doctor at every well-child visit about the milestones your child has reached and what to expect next.

What most children do by this age:

Social/Emotional Milestones

- ☐ Follows rules or takes turns when playing games with other children
- ☐ Sings, dances, or acts for you
- ☐ Does simple chores at home, like matching socks or clearing the table after eating

Language/Communication Milestones

- ☐ Tells a story she heard or made up with at least two events. For example, a cat was stuck in a tree and a firefighter saved it
- ☐ Answers simple questions about a book or story after you read or tell it to him
- ☐ Keeps a conversation going with more than three back-and-forth exchanges
- ☐ Uses or recognizes simple rhymes (bat-cat, ball-tall)

Cognitive Milestones

(learning, thinking, problem-solving)

- ☐ Counts to 10
- ☐ Names some numbers between 1 and 5 when you point to them
- ☐ Uses words about time, like "yesterday," "tomorrow," "morning," or "night"
- ☐ Pays attention for 5 to 10 minutes during activities. For example, during story time or making arts and crafts (screen time does not count)
- ☐ Writes some letters in her name
- ☐ Names some letters when you point to them

Movement/Physical Development Milestones

- ☐ Buttons some buttons
- ☐ Hops on one foot

Other important things to share with the doctor...

- What are some things you and your child do together?
- What are some things your child likes to do?
- Is there anything your child does or does not do that concerns you?
- Has your child lost any skills he/she once had?
- Does your child have any special healthcare needs or was he/she born prematurely?

You know your child best. Don't wait. If your child is not meeting one or more milestones, has lost skills he or she once had, or you have other concerns, act early. Talk with your child's doctor, share your concerns, and ask about developmental screening. If you or the doctor are still concerned:

DEDICATED TO THE HEALTH OF ALL CHILDREN®

Help your child learn and grow

As your child's first teacher, you can help his or her learning and brain development. Try these simple tips and activities in a safe way. Talk with your child's doctor and teachers if you have questions or for more ideas on how to help your child's development.

- Your child might start to “talk back” in order to feel independent and test what happens. Limit the attention you give to the negative words. Find alternative activities for her to do that allow her to take the lead and be independent. Make a point of noticing good behavior. “You stayed calm when I told you it’s bedtime.”
- Ask your child what she is playing. Help her expand her answers by asking “Why?” and “How?” For example, say “That’s a nice bridge you’re building. Why did you put it there?”
- Play with toys that encourage your child to put things together, such as puzzles and building blocks.
- Use words to help your child begin to understand time. For example, sing songs about the days of the week and let him know what day it is. Use words about time, such as today, tomorrow, and yesterday.
- Let your child do things for himself, even if he doesn’t do it perfectly. For example, let him make his bed, button his shirt, or pour water into a cup. Celebrate when he does it and try not to “fix” anything you don’t have to.
- Talk about and label your child’s and your own feelings. Read books and talk about the feelings characters have and why they have them.
- Play rhyming games. For example, say “What rhymes with cat?”
- Teach your child to follow rules in games. For example, play simple board games, card games, or Simon Says.
- Create a spot in your home for your child to go to when he’s upset. Stay nearby so your child knows he is safe and can come to you for help calming as needed.
- Set limits for screen time (TV, tablets, phones, etc.) for your child, to no more than 1 hour per day. Make a media use plan for your family.
- Eat meals with your child and enjoy family time talking together. Give the same meal to everyone. Avoid screen time (TV, tablets, phones, etc.) during mealtime. Let your child help prepare the healthy foods and enjoy them together.
- Encourage your child to “read” by looking at the pictures and telling the story.
- Play games that help with memory and attention. For example, play card games, Tic Tac Toe, I Spy, or Hot and Cold.

To see more tips and activities download CDC’s Milestone Tracker app.

This milestone checklist is not a substitute for a standardized, validated developmental screening tool. These developmental milestones show what most children (75% or more) can do by each age. Subject matter experts selected these milestones based on available data and expert consensus.

Positive Parenting Tips for Healthy Child Development

Middle Childhood (6-8 years of age)

Developmental Milestones

Middle childhood brings many changes in a child's life. By this time, children can dress themselves, catch a ball more easily using only their hands, and tie their shoes. Having independence from family becomes more important now. Events such as starting school bring children this age into regular contact with the larger world. Friendships become more and more important. Physical, social, and mental skills develop quickly at this time. This is a critical time for children to develop confidence in all areas of life, such as through friends, schoolwork, and sports.

Here is some information on how children develop during middle childhood:

Emotional/Social Changes

Children in this age group might:

- Show more independence from parents and family.
- Start to think about the future.
- Understand more about his or her place in the world.
- Pay more attention to friendships and teamwork.
- Want to be liked and accepted by friends.

Thinking and Learning

Children in this age group might:

- Show rapid development of mental skills.
- Learn better ways to describe experiences and talk about thoughts and feelings.
- Have less focus on one's self and more concern for others.

Positive Parenting Tips

Following are some things you, as a parent, can do to help your child during this time:

- Show affection for your child. Recognize her accomplishments.
- Help your child develop a sense of responsibility—ask him to help with household tasks, such as setting the table.
- Talk with your child about school, friends, and things she looks forward to in the future.
- Talk with your child about respecting others. Encourage him to help people in need.
- Help your child set her own achievable goals—she'll learn to take pride in herself and rely less on approval or reward from others.
- Help your child learn patience by letting others go first or by finishing a task before going out to play. Encourage him to think about possible consequences before acting.
- Make clear rules and stick to them, such as how long your child can watch TV or when she has to go to bed. Be clear about what behavior is okay and what is not okay.
- Do fun things together as a family, such as playing games, reading, and going to events in your community.

- Get involved with your child's school. Meet the teachers and staff and get to understand their learning goals and how you and the school can work together to help your child do well.
- Continue reading to your child. As your child learns to read, take turns reading to each other.
- Use discipline to guide and protect your child, rather than punishment to make him feel bad about himself. Follow up any discussion about what *not* to do with a discussion of what *to* do instead.
- Praise your child for good behavior. It's best to focus praise more on what your child does ("you worked hard to figure this out") than on traits she can't change ("you are smart").
- Support your child in taking on new challenges. Encourage her to solve problems, such as a disagreement with another child, on her own.
- Encourage your child to join school and community groups, such as a team sports, or to take advantage of volunteer opportunities.

Child Safety First

More physical ability and more independence can put children at risk for injuries from falls and other accidents. Motor vehicle crashes are the most common cause of death from unintentional injury among children this age.

- Protect your child properly in the car. For detailed information, see the American Academy of Pediatrics' Car Safety Seats: A Guide for Families.
- Teach your child to watch out for traffic and how to be safe when walking to school, riding a bike, and playing outside.
- Make sure your child understands water safety, and always supervise her when she's swimming or playing near water.
- Supervise your child when he's engaged in risky activities, such as climbing.
- Talk with your child about how to ask for help when she needs it.
- Keep potentially harmful household products, tools, equipment, and firearms out of your child's reach.

Healthy Bodies

- Parents can help make schools healthier. Work with your child's school to limit access to foods and drinks with added sugar, solid fat, and salt that can be purchased outside the school lunch program.
- Make sure your child has 1 hour or more of physical activity each day.
- Limit screen time for your child to no more than 1 to 2 hours per day of quality programming, at home, school, or afterschool care.
- Practice healthy eating habits and physical activity early. Encourage active play, and be a role model by eating healthy at family mealtimes and having an active lifestyle.

Positive Parenting Tips for Healthy Child Development

Middle Childhood (9-11 years of age)

Developmental Milestones

Your child's growing independence from the family and interest in friends might be obvious by now. Healthy friendships are very important to your child's development, but peer pressure can become strong during this time. Children who feel good about themselves are more able to resist negative peer pressure and make better choices for themselves. This is an important time for children to gain a sense of responsibility along with their growing independence. Also, physical changes of puberty might be showing by now, especially for girls. Another big change children need to prepare for during this time is starting middle or junior high school.

Here is some information on how children develop during middle childhood:

Emotional/Social Changes

Children in this age group might:

- Start to form stronger, more complex friendships and peer relationships. It becomes more emotionally important to have friends, especially of the same sex.
- Experience more peer pressure.
- Become more aware of his or her body as puberty approaches. Body image and eating problems sometimes start around this age.

Thinking and Learning

Children in this age group might:

- Face more academic challenges at school.
- Become more independent from the family.
- Begin to see the point of view of others more clearly.
- Have an increased attention span.

Positive Parenting Tips

Following are some things you, as a parent, can do to help your child during this time:

- Spend time with your child. Talk with her about her friends, her accomplishments, and what challenges she will face.
- Be involved with your child's school. Go to school events; meet your child's teachers.
- Encourage your child to join school and community groups, such as a sports team, or to be a volunteer for a charity.
- Help your child develop his own sense of right and wrong. Talk with him about risky things friends might pressure him to do, like smoking or dangerous physical dares.
- Help your child develop a sense of responsibility—involve your child in household tasks like cleaning and cooking. Talk with your child about saving and spending money wisely.
- Meet the families of your child's friends.
- Talk with your child about respecting others. Encourage her to help people in need. Talk with her about what to do when others are not kind or are disrespectful.

- Help your child set his own goals. Encourage him to think about skills and abilities he would like to have and about how to develop them.
- Make clear rules and stick to them. Talk with your child about what you expect from her (behavior) when no adults are present. If you provide reasons for rules, it will help her to know what to do in most situations.
- Use discipline to guide and protect your child, instead of punishment to make him feel badly about himself.
- When using praise, help your child think about her own accomplishments. Saying "you must be proud of yourself" rather than simply "I'm proud of you" can encourage your child to make good choices when nobody is around to praise her.
- Talk with your child about the normal physical and emotional changes of puberty.
- Encourage your child to read every day. Talk with him about his homework.
- Be affectionate and honest with your child, and do things together as a family.

Child Safety First

More independence and less adult supervision can put children at risk for injuries from falls and other accidents. Here are a few tips to help protect your child:

- Protect your child in the car. The National Highway Traffic Safety Administration recommends that you keep your child in a booster seat until he is big enough to fit in a seat belt properly. Remember: your child should still ride in the back seat until he or she is 12 years of age because it's safer there. Motor vehicle crashes are the most common cause of death from unintentional injury among children of this age.
- Know where your child is and whether a responsible adult is present. Make plans with your child for when he will call you, where you can find him, and what time you expect him home.
- Make sure your child wears a helmet when riding a bike or a skateboard or using inline skates; riding on a motorcycle, snowmobile, or all-terrain vehicle; or playing contact sports.
- Many children get home from school before their parents get home from work. It is important to have clear rules and plans for your child when she is home alone.

Healthy Bodies

- Provide plenty of fruits and vegetables; limit foods high in solid fats, added sugars, or salt, and prepare healthier foods for family meals.
- Keep television sets out of your child's bedroom. Limit screen time, including computers and video games, to no more than 1 to 2 hours.
- Encourage your child to participate in an hour a day of physical activities that are age appropriate and enjoyable and that offer variety! Just make sure your child is doing three types of activity: aerobic activity like running, muscle strengthening like climbing, and bone strengthening – like jumping rope – at least three days per week.

Child Development: Concerns About Development

- Use the milestones to help identify possible delays
- Share what you are observing with the child's family
- Encourage the parent or guardian to contact the child's health care provider about any concerns
